

*Creating
A More Vibrant Society
Through Mobility*

We are committed to building a sustainable community
where everyone can live dynamically and fully realize their potential.

TOYOTA
mobility
FOUNDATION

Toyota Mobility Foundation works with a diverse range of partners to solve social issues related to mobility around the world.

Through collaborative efforts with like-minded people, we will determinedly take on the challenge of creating innovative technologies and systems to realize a more vibrant and sustainable future society and pursue the joy of mobility.

Action Guidelines- Toyota Mobility Foundation (TMF) Principles

- TMF creates a legacy that delivers a rich and sustainable society to future generations through activities that realize freedom of mobility globally.
- TMF challenges to implement innovative technologies and systems that will bring change to society.
- TMF collaborates with diverse partners who share common values to achieve these goals. TMF acquires knowledge through its activities and share what it learns with society.

Key Focus Areas

Traffic Safety

Aiming for zero casualties from traffic accidents, we are working on traffic safety from two angles: educational activities focused on child safety and safe driving for older adults, and efforts to prevent accidents using technology and data.

Measures to mitigate traffic congestion

An increase in mobility needs accompanies economic growth and urbanization in emerging countries in the ASEAN region, aggravating traffic congestion and air pollution. To resolve these issues, we are implementing various initiatives that utilize vehicle movement data from traffic management, infrastructure development, and urban planning perspectives.

Key Focus Areas

Support for people with mobility challenges

To realize our goal of "Mobility for All," we aim to create a world where people everywhere can enjoy safe, secure freedom of movement regardless of disability.

Hydrogen/Energy

To realize a decarbonized society, we provide grants to universities and research institutions for basic research on CO₂-free hydrogen to help it become more widespread and conduct joint research with grant recipients.

Key Focus Areas

Mobility support for local communities

To solve the various mobility issues that differ between countries and regions, we support efforts to secure mobility in areas in Japan where depopulation and aging are progressing, and effectively utilize public transportation in areas with growing populations, and also help to secure mobility in rural areas of Africa.

Contests/Open calls

We hold contests and open calls to support people who have new ideas and technologies aimed at solving mobility issues in society. We hope to realize a "ever-better mobility society" by supporting innovative ideas and technology.
